

## Measuring Your Children

### **General tips:**

- You will need your child, a measuring tape, paper and pen
- Make sure your child takes his or her shoes off and removes any bulky items of clothing like jumpers or baggy trousers
- The measurements should be actual body measurements
- Kindly DO NOT be tempted to add "room for growth" at this stage,

### **Measurements:**

|    |                          |  |           |
|----|--------------------------|--|-----------|
| 1  | Body Height              |  | In Inches |
| 2  | Full chest (all around): |  |           |
| 3  | Waist                    |  |           |
| ** | Shoe size in inches      |  |           |

\*\* Remove your shoes. It is important you keep your socks on while measuring your shoe size, as you would obviously wear shoes with socks. This will help you get an even accurate measurement. Place your foot firmly on the paper. Your toes should not be curled. Now draw straight line at you toe tip and heels and measure the distance between these two lines in inches. Kindly DO NOT add "room for growth" at this stage as the growth margin will be calculated by us.

Thanks for your help in providing quality and comfort uniforms.

Thanking you
